

DEEPANSHU

Gurugram, India | zorodeepanshu@gmail.com | [GitHub](#) | [LinkedIn](#) | [HackTheBox](#)

SUMMARY

Offensive security specialist and ranked 'Hacker' HackTheBox competitor with deep practical knowledge in network exploitation, Linux environments, and Active Directory security. Highly skilled in simulating realistic threat landscapes, executing custom network scripts, and uncovering vulnerabilities. Committed to securing enterprise networks by combining continuous learning with rigorous hands-on laboratory practice.

TECHNICAL SKILLS

Active Directory Security: Domain Enumeration, Kerberoasting, AS-REP Roasting, Pass-the-Hash, Pass-the-Ticket, DCSync, Domain Privilege Escalation (using tools like Rubeus, Mimikatz, PowerView, BloodHound, SharpHound, NetExec/NXC, and CrackMapExec/CME)

Languages & Scripting: Python, Bash, Modern C++, C, Java, PowerShell

Offensive Tools: Nmap, Burp Suite, Metasploit Framework, Wireshark, Nessus, Hashcat, John the Ripper

Environment & Security Core: Linux (Kali/Debian), Windows Server, VAPT, Network Security, Open-Source Intelligence (OSINT), Git

PRACTICAL EXPERIENCE

Hack The Box Labs

Offensive Security Practice

Ongoing

Online

- Attained **Platinum Rank (Season 10)** by independently compromising numerous advanced target machines, placing in the top tier of security competitors globally.
- Compromised multiple target machines and resolved security challenges covering Linux and Active Directory environments across all difficulty levels.

CAPTURE THE FLAG (CTF) COMPETITIONS

Competitive Penetration Testing

2025 - 2026

- Secured **2nd place** (₹5,000 cash prize) at SAPIENSEC CTF by successfully resolving complex Web Exploitation, Cryptography, and Digital Forensics challenges.
- Outperformed **91% of teams** at the May 2026 SecLeaf CTF, achieving 65th rank out of 750 global participating teams by identifying and exploiting network vulnerabilities within an intensive 24-hour window.
- Participated in various capture the flag events, actively expanding hands-on skills in cryptography and reverse engineering.

PROJECTS

Spectre_Scan (Network Scanner)

2026

Python, Low-Level Networking

[Verify on GitHub](#)

- Engineered a multithreaded Python network scanner utilizing low-level socket programming and Scapy to execute asynchronous host discovery and high-speed port scanning.
- Automated reconnaissance phases by crafting custom TCP/UDP packets, enabling accurate discovery of active hosts and identification of open ports across complex subnet topologies.

EDUCATION

Dronacharya College of Engineering

Gurugram, India

B.Tech in Cyber Security

2024 - 2028 (Expected)

CERTIFICATIONS

- Oracle Cloud 2025 Certified AI Foundations Associate**
- Certified Online Fraud Prevention Specialist** — Hack & Fix
- Introduction to Cybersecurity** — Cisco Networking Academy
